CARDS – DIAGNOS’ new technology to the service of Ressources Dianor

Brossard, Quebec, Canada – March 31, 2005 - DIAGNOS inc. (“DIAGNOS” or the “Company”) (VENTURE TSX: ADK), a leader in knowledge extraction and artificial intelligence, announced today the signature of an agreement for the use of its system CARDS (Computer Aided Resource Detection Software) on the properties of Ressources Dianor.

“If the technology of CARDS is confirmed, the relationship that we established with DIAGNOS will become a long-term one” declared Daniel Duval, chairman of the board of Ressources Dianor. “Once all the data of Ressources Dianor is received, our team will take roughly from 5 to 10 days to process the data. The final result is then presented in the form of a map (MapInfo or Geosoft). This map indicates the areas favourable to the kimberlite drilling. This can only be done by analyzing the past exploration programs and focusing on the new ones” said André Larente, President of DIAGNOS.

About DIAGNOS

DIAGNOS develops and markets data mining software. The Company designed, developed and markets MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability.

The Company’s objective is to develop a royalty stream by significantly increasing the exploration success rate of mining and oil and gas companies around the world.
