VENTURE TSX TICKER: ADK

DIAGNOS acquires a new mining property in the Amos region: “les collines Béarn”

Brossard, Quebec, Canada – April 26, 2006 - DIAGNOS inc. (“DIAGNOS” or the “Company”) (VENTURE TSX: ADK), a leader in knowledge extraction and artificial intelligence, announced today that its Natural Resources Division continues its step of acquisition of claims by acquiring a new property.

This batch of acquired mining titles is located in the Dalquier Township, in the north east of St-Félix-de-Dalquier (NTS map sheet 32D09), west of the Amos mine (Jay Copper) (2,903,000 tons at 1.11% Cu + 0.93% Zn + 37.69 g/t Ag + 0.12 g/t Au) and east of Raymor deposit (500,000 tons at 5.50 g/t Au). This zone was highlighted thanks to DIAGNOS’ CARDS (Computer Aided Resource Detection Software) technology, which makes it possible to find the sites having the same signature as mines and known deposit of massive sulphides and gold.

Several very interesting anomalies were identified by surveys of Input (EM) and remain to be tested. The exploration reports identified two showings: a drill hole of 1949 had an intersection of 17.8 g/t Au on 2 meters and the last drilling, which goes back to 1988, presents 15.7% on 0.14 meters and 17.9% Pb and 1.6 g/t Au on 0.2 meters. This property does warrant further exploration expenditure.

The Company will be seeking partners to develop the newly acquired permits and will pursue additional acquisitions in the future.

About DIAGNOS

DIAGNOS inc. develops and markets data mining software. The Company designed and developed MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. CARDS (*Computer Aided Resource Detection Software*) can be applied to several sectors of prospecting, such as diamond, gold, zinc, copper and the oil and gas, and each one of these resources require a distinct methodology endorsed by the application. For further information, please visit our Website at www.diagnos.ca.

The Company’s objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining and oil and gas companies.
