VENTURE TSX TICKER: ADK

DIAGNOS acquires two new uranium properties on Côte Nord, Quebec

Brossard, Quebec, Canada – April 12, 2007 - DIAGNOS inc. ("DIAGNOS" or the "Corporation") (VENTURE TSX: ADK), a leader in knowledge extraction and artificial intelligence, announced today that its natural resources division has acquired two new properties based on the interpretation of a database from the Quebec government for the Côte Nord region.

These new titles totaling over 4,770 hectares are located north of Natashquan in NTS sheets 12L16 and 12M08 and in areas with high uranium and/or mineral potential. Companies like Uranor and Sheridan Platinum Group are present in this area.

The first property is Urasand. Uranium anomalies in foliated granites of Buit Complex have a similarity with showings in the granitoid rocks of Lac Turgeon. Furthermore, geological and geo-chronological contexts of the region are close to Olympic Dam deposits of Australia (Goulet et Jébrak, 2000). In the region where the properties are located, a shear zone, a fault of many kilometers, and the presence of hematite and magnetite are indicators of important uranium potential.

The second property, Lac Barrin North, consists in two areas presenting uranium anomalies in quartz and feldspar porphyry. Geochronology and the proximity of Wakeham Group rocks (carbonated sandstone) indicate also the possibility of finding uranium in the area.

DIAGNOS is currently negotiating for partnership regarding its properties on Côte Nord and elsewhere in the province of Quebec.

About DIAGNOS

DIAGNOS inc. has developed data mining software and provides data mining services. The Corporation designed and developed MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. CARDS (Computer Aided Resource Detection System) can be applied to several sectors of prospecting, such as diamond, gold, zinc, copper and the oil and gas, and each one of these resources require a distinct methodology endorsed by the application. For further information, please visit our Website at www.diagnos.ca.

The Corporation's objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining and oil and gas companies.

The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this release.
