

## PRESS RELEASE

*For immediate distribution*

SOURCE: DIAGNOS inc.

VENTURE TSX TICKER: ADK

### **DIAGNOS and Black Mountain Inc. signed an option agreement for the acquisition of nickel properties in the Abitibi region of Quebec**

Brossard, Quebec, Canada – March 12, 2007 - DIAGNOS inc. ("DIAGNOS" or the "Company") (VENTURE TSX: ADK), a leader in knowledge extraction and artificial intelligence, announced today that it has signed an option agreement with Black Mountain Inc., a Canadian mineral exploration company, granting an option to acquire 100% interest in two prospective nickel properties in the Abitibi region of Quebec. The projects consist of 75 claims covering approximately 3,200 acres of terrain in a region with two significant nickel deposits and one past-producing mine. The later include the 300 million ton of nickel at 0.34% of the Dumont deposit, the 59,000 ton of copper at 0.68% and of nickel at 0.31% of the Wendell deposit and the 700,000 ton of nickel at 2.25% of the Marbridge mine. The Vassan nickel project is extremely prospective for the discovery of significant copper mineralization given that it lies at the northern extremity of a North-South Trending nickel rich till train, similar to the one that descends from the Marbridge mine site. Nickel values in the till ranged from 300 to 650ppm. The Amos nickel project is equally prospective as it lies along strike of the Dumont deposit and within 2km of several historical drill holes that recovered approximately 0.15% Ni over 40+ meters.

Black Mountain will pay DIAGNOS a sum of \$45,000 CDN for each of the two properties (\$90,000 total). Furthermore, for each property upon which an economic discovery is made, a bonus of \$70,000 in shares and a 2% NSR (Net Smelter Return) will be issued to DIAGNOS. Black Mountain can acquire 1% of the NSR for \$1,000,000 CDN.

DIAGNOS will assist Black Mountain to find targets by using the CARDS (Computer Aided Resource Detection Software) technology to identify the sites having the same signature as known mines and deposits. Moreover, Black Mountain will have the option to acquire several additional properties from DIAGNOS in Quebec.

"DIAGNOS is working with multiple exploration companies outside the Province of Quebec to identify acquisitions of new properties. The management of Black Mountain is proud to make its entry on the mining exploration scene in Quebec, an area which was rated as the fifth most desirable jurisdiction worldwide to conduct mining and exploration operations according to Fraser Institute 2005/06 Policy Potential Index." declared Mr Andre Larente, President of DIAGNOS.

#### About DIAGNOS

DIAGNOS inc. develops and markets data mining software. The Company designed and developed MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. CARDS (*Computer Aided Resource Detection Software*) can be applied to several sectors of prospecting, such as diamond, gold, zinc, copper and the oil and gas, and each one of these resources require a distinct methodology endorsed by the application. For further information, please visit our Website at [www.diagnos.ca](http://www.diagnos.ca).

The Company's objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining and oil and gas companies.
