VENTURE TSX TICKER: ADK

### **DIAGNOS and Sage Gold Inc. to find new gold deposit in Chibougamau**

Brossard, Quebec, Canada – March 16, 2006 - DIAGNOS inc. ("DIAGNOS" or the "Company") (VENTURE TSX: ADK), a leader in knowledge extraction and artificial intelligence, announced today the signature of an agreement for the use of its system CARDS (Computer Aided Resource Detection Software) to generate advanced analytics for exploration program on licenses own by Sage Gold Inc in the area. Sage Gold is a publicly trading company on the TSX Venture Exchange.

"Thanks to the work completed by DIAGNOS with the Quebec government data in the Chibougamau region (32G), we can start investigating targets on our property located in the area. The concept is to conduct a detailed survey of our properties, learn how to identify these targets over the known areas, and apply DIAGNOS' CARDS technology to identify similar targets over other less explored claims. The historical data in the region will be reviewed using more modern technology from DIAGNOS to enable our team to focus on the higher grade zones" said Nigel Lees, President of Sage Gold.

"We have been working with Sage Gold for several months and we believe that we can advance the work done in the past through our CARDS methodologies. By using CARDS, the team of geologists at Sage Gold can spend more time investigating targets. The final targets will be chosen by the head geologist at Sage Gold" declared André Larente, President of DIAGNOS.

DIAGNOS will charge a consultation fee and, following each major discovery from CARDS' targets, will receive a success bonus in form of shares. Sage Gold is also looking at the possible acquisition of some of DIAGNOS' properties in same region.

#### About DIAGNOS

DIAGNOS inc. develops and markets data mining software. The Company designed, developed and markets MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. CARDS (*Computer Aided Resource Detection Software*) can be applied to several sectors of prospecting, such as diamond, gold, zinc, copper and the oil and gas, and each one of these resources require a distinct methodology endorsed by the application. For further information, please visit our Website at [www.diagnos.ca](http://www.diagnos.ca).

The Company's objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining and oil and gas companies around the world.

The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this release.
