VENTURE TSX TICKER: ADK

DIAGNOS hires new vice-president for its natural resource division

Brossard, Quebec, Canada – March 20, 2007 - DIAGNOS inc. ("DIAGNOS" or the "Company") (VENTURE TSX: ADK), a leader in knowledge extraction and artificial intelligence, is happy to announce the appointment of Ms Jacqueline Monfourny to the position of vice-president for its natural resources division.

Ms Monfourny graduated from the University of Quebec in Montreal (UQAM) in 1985 with a Bachelor Degree of Science in Geology and worked in geological mapping and photo-interpretation including a period with the ministry of natural resources of Quebec and the geological survey of Canada, in Ottawa.

She also holds a Master of Business Administration (MBA) from Laval University, in Quebec City, and specialized in international trade. Cumulating nearly twenty years of experience in management, she held the positions of export director, trade commissioner for the Outaouais region as well as general director of international promotion. As a trainer or consultant including for Raymond Chabot Grant Thornton and the Business Development Bank of Canada (BDC), she supported many companies in their start-up or growth phases.

Trilingual, she managed large scale projects in Chile, Brazil and in Argentina as an executive vice-president of an international expertise transfer company (SIODE). Ms Monfourny says that she is extremely motivated by this new challenge. "In my opinion, the internationalization of DIAGNOS passes through its natural resources division and it is now that we will maximize on what the scientific and management teams worked so much on. I am very proud to add my competences and experiences to those of a company whose growth not only seems assured, but which contains a priceless potential."

"DIAGNOS is proud to welcome Ms Monfourny, who, with her education and professional experience, will be able to lead the natural resources division of the Corporation through a period of strong growth" declared Mr André Larente, President of DIAGNOS.

About DIAGNOS

DIAGNOS inc. develops and markets data mining software. The Company designed and developed MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. CARDS (*Computer Aided Resource Detection Software*) can be applied to several sectors of prospecting, such as diamond, gold, zinc, copper and the oil and gas, and each one of these resources require a distinct methodology endorsed by the application. For further information, please visit our Website at www.diagnos.ca.

The Company's objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining and oil and gas companies.
