

DIAGNOS is teaming up with Mathieu Bois – High Level Swimming Athlete

September 18, 2007 – DIAGNOS inc. (VENTURE TSX: ADK), a leader in the use of artificial intelligence (“AI”) and advanced knowledge extraction techniques, is proud to announce that it sponsors sport’s excellence by giving, for a second year in a row, an excellence bursary to [Mathieu Bois](#), one of the best Canadian breaststrokes, in order to support him in its preparation for the 2008 Beijing Olympic Games that will take place in August 2008.

Nineteen year-old Mathieu Bois is part of the Senior national team and is quickly climbing the ranks as one of Canada’s top breaststrokes (Canadian ranking for the 100 meters breaststroke and the 200 meters breaststroke – second) while cutting a place among the world’s best breaststrokes (World ranking for the 100 meters breaststroke – 26th).

Last July, Mathieu took away the bronze medal for the 100 meters breaststroke event and placed 5th for the 200 meters breaststroke event at the Pan American Games that took place in Rio de Janeiro, in Brazil – breaking at the same time two new provincial records.

In 2006, Mathieu represented Canada:

- at the Pan Pacific Games - Victoria, British Columbia;
- at the FINA Short Course World Swimming Championship – Shanghai, China;
- at the Commonwealth Games - Melbourne, Australia.

Over the course of his career, Mathieu set 18 provincial records and one age-group national record in the 100 meters and 200 meters breaststroke, records previously held by no other than Morgan Knabe.

He is presently studying at the Collège de Maisonneuve in Human Sciences with mathematics and trains at the National Swimming Centre of Montreal located at the Olympic Park’s swimming pools under the direction of Benoît Lebrun.

DIAGNOS is particularly proud to team up with one of Canada’s best hopes in swimming and to give this bursary to this talented young man whose determination will certainly lead him to his dream. “I am convinced that our financial support will certainly make a difference in the long run, since it is given at a crucial moment of the career of this athlete. DIAGNOS thus wishes to offer the chance to Mathieu to be devoted to his training and his studies without being too much concerned with financial aspects” declared Mr Larente.

About DIAGNOS

DIAGNOS inc. has developed data mining software and provides data mining services. The Corporation designed and developed MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. CARDS (Computer Aided Resource Detection Software) can be applied to several sectors of prospecting, such as diamond, gold, zinc, copper and the oil and gas, and each one of these resources require a distinct methodology endorsed by the application.
