DIAGNOS launches MCubiX-EP (Enterprise Predictor)

Longueuil, Canada – November 23, 2004 – DIAGNOS inc. ("DIAGNOS" or the "Company") (TSX: ADK) will take advantage of its participation in the Expo TI Performance of Montreal (held at the Palais des Congrès on November 24-25) to launch MCubiX-EP (Enterprise Predictor), its latest Business Intelligence software offering.

In order to offer an enterprise-wide data mining solution, DIAGNOS launches MCubiX-EP, a family of scoring services that applies to local or distributed large scale databases the predictive models developed with MCubiX-KE (Knowledge Extractor). MCubiX-EP is easily integrated to any end-user application that would benefit from a data mining module and scoring engine. The tight integration of MCubiX-EP with end-user applications such as CRM's, ERP's and others provides the users with the benefits of data mining without having to deal with the complexities of modeling and scoring data. MCubiX-EP is a highly scalable solution that provides applications with the capability to score thousands of transactions per second, anywhere in a corporate network.

The knowledge derived from data mining can be used in many different sectors such as: marketing, biotechnology, natural resources exploration and many more. Mr André Larente, President of DIAGNOS mentions that in the natural resources sector, "our software can identify the signature of highly profitable areas and discover areas with similar potential in unexploited territories, thus substantially reducing prospecting costs. The same techniques can be used to anticipate and prevent frauds, to reduce customer churn, to increase the hit rate of a mailing campaign or even to acquire more profitable clients."

About DIAGNOS

DIAGNOS inc. develops and markets data mining software. The Company designed, developed and markets MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability.
