VENTURE TSX TICKER: ADK

DIAGNOS signs its largest strategic agreement for a major mining project

Brossard, Quebec, Canada – April 1, 2008 - DIAGNOS inc. ("DIAGNOS" or the "Corporation") (VENTURE TSX: ADK), a leader in the use of artificial intelligence ("AI") and advanced knowledge extraction techniques, announced today the signature of a service agreement for a large targeting project based on 50 elements with an important private Canadian investment group. DIAGNOS will use CARDS (Computer Aided Resources Detection System) on the data acquired from the Canadian government with the aim of identifying targets for precious and base metals on a territory covering 23,178 thousands squared kilometers.

DIAGNOS' 22-person multidisciplinary team includes professionals in geophysics, geology; artificial intelligence, mathematics, as well as, remote sensing and image interpretation. This team will be analyzing the following data acquired from the Canadian Federal Government and provincial government:

- A coverage of MAG, Spectro, EM and geochemical (lake sediment) that consists of 50 elements. There are 3,600,000 airborne coordinates on a 40m x 40m cell width grid;
- A second coverage of MAG, Spectro and geochemical (lake sediment) that consists of 35 elements and 8,000,000 airborne coordinates. There is a total of approximately 12 millions airborne coordinates with over 1,600 existing drill holes of information.

For further information, please visit our Website at www.diagnos.ca. The Corporation's objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining and oil and gas companies.
