PRESS RELEASE

For immediate distribution

SOURCE: DIAGNOS inc.

VENTURE TSX TICKER: ADK

DIAGNOS will analyze 3D data from Mines Cancor Inc.

Brossard, Quebec, Canada – May 5, 2005 - DIAGNOS inc. ("DIAGNOS" or the "Company") (VENTURE TSX: ADK), a leader in knowledge extraction and artificial intelligence, announced today the signature of an agreement for the use of its system CARDS (Computer Aided Resource Detection Software) to generate targets for exploration on the properties of Mines Cancor Inc.

"With the incredible quantity of data which we gathered and compiled over the years, the use of the artificial intelligence in order to analyze our various layers of data can only be advantageous for exploration" said Kamil A. Khobzi, President of Mines Cancor Inc. "We have had very positive comments from geologists who predicted that the CARDS' technology developed by DIAGNOS could become the next generation of tools to be used for target acquisition. Like electromagnetism changed their way of working in the past "declared André Larente, President of DIAGNOS.

DIAGNOS will charge a consultation fee and, following each major discovery from CARDS' targets, will receive 200,000 common shares of Mines Cancor Inc.

About DIAGNOS

DIAGNOS inc. is committed in the development and the marketing of knowledge extraction software. The Company designed and developed MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. CARDS *(Computer Aided Resource Detection Software)* can be applied to several sectors of prospecting, such as diamond, gold, zinc, copper and the oil and gas, and each one of these resources require a distinct methodology endorsed by the application.

The Company's objective is to develop a royalty stream by significantly increasing the exploration success rate of mining and oil and gas companies around the world.
