TSX VENTURE TICKER: ADK

Everton Resources will use DIAGNOS' CARDS technology for its properties in the Dominican Republic

Brossard, Quebec, Canada – March 28, 2007 - DIAGNOS inc. ("DIAGNOS" or the "Company") (TSX VENTURE: ADK), a leader in knowledge extraction and artificial intelligence, announced today the signature of an agreement with Everton Resources Inc., based on the results of CARDS (Computer Aided Resources Detection Software), on their properties in the Dominican Republic.

« We were pleasantly surprised of the accuracy of the potential drilling targets generated by CARDS on our properties. Indeed, there is a great concordance between our conclusions of field analysis and the targets suggested by this technology. CARDS seems to be an interesting tool to supplement the field work of geologists and to generate good targets for exploration. We consider a long-term partnership with DIAGNOS in the Dominican Republic » declared Mr Marc L'Heureux, Vice-President of Exploration and Acquisitions at Everton Resources Inc.

In addition, Mr Michel Fontaine, Vice-President - Business Development at DIAGNOS says he is proud of the progress made in the business model of DIAGNOS regarding natural resources. « CARDS is a system using an iterative process and is in constant evolution. The conclusion of our work on public data in the Dominican Republic consolidates us in the idea that it can be an effective service of support allowing savings in time, money and energy. »

DIAGNOS has assembled a high level team of scientists with masters and PhDs in artificial intelligence, mathematics, imaging, geology and geophysics and a management team to support its customer in mining exploration.

About DIAGNOS

DIAGNOS inc. develops and markets data mining software. The Company designed and developed MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. CARDS (Computer Aided Resource Detection Software) can be applied to several sectors of prospecting, such as diamond, gold, zinc, copper and the oil and gas, and each one of these resources require a distinct methodology endorsed by the application. For further information, please visit our Website at www.diagnos.ca.

The Company's objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining and oil and gas companies.

The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this release.
