DIAGNOS and Eskay Mining Inc. to develop targets for Precious and Base metals on Eskay Project

Brossard, Quebec, Canada – January 13th, 2010 - DIAGNOS inc. (“DIAGNOS” or “the Corporation”) (TSX Venture: ADK), a leader in the use of artificial intelligence and advanced knowledge-extraction techniques, announced today that it has signed a contract with Eskay Mining Inc. (“Eskay”) for the analysis of a geophysical survey of 130,000 acres on their property located in the Stewart region surrounding Barrick Gold Corp.’s property in British Columbia.

The Corporation will use its CARDS system (Computer Aided Resources Detection System) which is used to identify areas with high similarities to known mineral deposits. “We are pleased to have been chosen to provide our services using our proprietary technology”, said Michel Fontaine, Vice President – Business Development.

“Eskay Creek has always looked like a Cadillac among mines. Indeed it ended up becoming one of the most prolific mines in the world, and at one stage was the second richest gold mine in Canada, and the fifth largest silver producer in the world”, said Mac Balkam, CEO, Eskay Mining.

About ESKAY

In total Eskay Mining Corp holds 46,400 hectares of mineral tenure beside and south of the Eskay Creek Mine. Work by other companies to the East and West include efforts to put mines into production. As BC is a mining friendly jurisdiction, focus is coming back to our region.

About DIAGNOS

Founded in 1998, DIAGNOS is a publicly traded Canadian corporation with a mission to commercialize technologies combining contextual imaging and traditional data mining thereby improving decision making processes. DIAGNOS offers products, services, and solutions to clients in a variety of fields including natural resources, healthcare, and entertainment.
