## Puma Exploration to use DIAGNOS CARDS technology on its Turgeon project in New Brunswick

Brossard, Quebec, Canada – January 19, 2011 - DIAGNOS inc. (“DIAGNOS” or the “Corporation”) (TSX Venture: ADK), a leader in the use of artificial intelligence (“AI”) and advanced knowledge extraction techniques, announced today the signature of an agreement with Puma Exploration inc. (“PUMA”) for the analysis of its data set relating to the Turgeon base and precious metals project in New Brunswick.

DIAGNOS will assist PUMA to find targets by using its CARDS technology (Computer Aided Resource Detection Software) that identifies sites with the same signatures as known mines and deposits.

“I followed the evolution of the CARDS technology these past few years. The latest results of their work seem to confirm that the targets generated by CARDS can be very accurate. Their success rate in base metals has convinced us to try this tool for exploration. The first objective is to test whether our targets overlap existing targets from CARDS. Subsequently, we will do work on targets generated by CARDS in areas with less historical work done on the Turgeon project” declared Mr. Marcel Robillard, President of PUMA.

### About Puma Exploration

Puma Exploration is a Canadian exploration company with advanced projects in base and precious metals in New Brunswick and Manitoba. The Turgeon property in New Brunswick is located just 5 miles south of the deepwater port of Belledune. The property is accessible by road all year and is crossed by a transmission line. The total current area of the property is 24.5 km<sup>2</sup> (2,450 hectares).

### About DIAGNOS

Founded in 1998, DIAGNOS is a publicly traded Canadian corporation with a mission to commercialize technologies combining contextual imaging and traditional data mining thereby improving decision making processes. DIAGNOS offers products, services, and solutions to clients in a variety of fields including natural resources, healthcare, and entertainment.
