Nova Uranium Corporation chooses DIAGNOS CARDS system

Brossard, Quebec, Canada – February 22, 2005 - DIAGNOS inc. ("DIAGNOS" or the "Company") (VENTURE TSX: ADK), a leader in knowledge extraction and artificial intelligence, announced today a new agreement for the discovery of uranium on Nova Uranium Corporation's properties in Quebec using CARDS (Computer Aided Resource Detection Software).

"The uranium demand is increasing and the properties we have in Quebec could be a good source for production" said Don Moore, President of Nova Uranium Corporation. "We can help Nova Uranium Corporation optimize their exploration program in two ways: the first is to reduce the number of existing targets to drill and secondly concentrate the exploration time and money on highly significant potential rich zones. This can only be done by analyzing the past exploration programs and focusing on the new ones." said André Larente, President of DIAGNOS.

About DIAGNOS

DIAGNOS develops and markets data mining software. The Company designed, developed and markets MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability.

The Company's objective is to develop a royalty stream by significantly increasing the exploration success rate of mining and oil & gas companies.
