VENTURE TSX TICKER: ADK

The Artificial Intelligence of DIAGNOS to the service of Phincorp Capital Markets for the management of assets and the sale of signals in the foreign exchange market

Brossard, Quebec, Canada – May 10, 2007 - DIAGNOS inc. ("DIAGNOS" or the "Corporation") (VENTURE TSX: ADK), a leader in the use of Artificial Intelligence ("AI") and advanced knowledge extraction techniques, announced today the signature of an agreement with Phincorp Capital Markets, a specialist in asset and risk management in the foreign exchange market, commodities and indexes.

DIAGNOS will receive a royalty on 10% of the revenues of the Phincorp Global Asset Management Division, responsible for asset management, and 10% on the revenues of Phincorp Technical Research Division, responsible to create and market products pertaining to the analysis and sale of signals both for their private and institutional clients.

"We can say mission accomplished! After 9 months of hard work and 6 months of testing, the algorithms developed by our technical team and based on the market experience of the Phincorp team should interest the portfolio managers in the next months. We are confident that the algorithms will be able to evolve and adapt according to the currencies, which are USD (United States), CAD (Canada), Euro (Europe), JPY (Japan), AUD (Australia), GBP (United Kingdom), CHF (Switzerland), SEK (Sweden), NOK (Norway), DKK (Denmark) as well as the indexes with great capitalization such as NIKKEI 225, Dow-Jones, S&P 500, NASDAQ Composite, FTST 100, etc". declared Michel Fontaine, Vice-President – Business Development at DIAGNOS inc.

In addition, Mr Marius Alexe Padina, President of Phincorp Capitals Markets declared: «One of the main advantages is that the systems we have can handle the needs of a very wide range of customers. We offer Day Trading signals in the currencies for the Traders, an alternative service of asset management for the accredited private investors and the institutional investors, and a cover service for the commercial clients working in the commodities and foreign exchange markets. The advantage of our algorithms is that they replicate perfectly a forecast method for trends, used by our team for several years on the currencies, index and commodity futures. The other advantage is that the Artificial Intelligence engine of DIAGNOS will allow an optimization of each market's parameters based on the specific volatility characteristics. This will allow increased management of the risk/reward ratio. To the best of my knowledge, it is a unique combination of IT and financial markets expertise. Step by step, "the street", will see the results of our work in the months to come".

About DIAGNOS

DIAGNOS inc. is committed in the development and marketing of data mining software. The Corporation designed and developed MCubiX, a data mining software suite capable of extracting knowledge from historical data - in the form of images, text or traditional databases - and making predictions that improve business processes and decision making ability. For further information, please visit our Website at www.diagnos.ca.

The Corporation's objective is to develop a royalty stream in its Finance Division by automating the work of the analysts in order to increase the yields in the foreign currencies, the commodities and the indexes. Our business model for the Natural Resources and Oil & Gas Division remains unchanged.

The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this release.
