Tomagold Corporation awards DIAGNOS a contract to use its artificial intelligence technology to target gold and copper

Brossard, Quebec, Canada – July 12, 2012- DIAGNOS inc. ("DIAGNOS" or the "Corporation") (VENTURE TSX: ADK), a leader in the use of artificial intelligence ("AI") and advanced knowledge extraction techniques, is pleased to announce today that its CARDS(Computer Aided Resources Software) technology will be used to target gold and copper on TomaGold Corporation. ("TomaGold") (Venture TSX: LOT) properties in the Chibougamau region.

DIAGNOS will assist Tomagold to find targets by using its CARDS (Computer Aided Resource Detection Software) technology, which makes it possible to identify the sites having the same signature as known mines and deposits.

"TomaGold is hopeful that DIAGNOS' technology will be accurate and effective surroundings our major discovery of 237.6 g/t of gold over 5.7 metres in Hole M-12-60 on the Monster lake project. Further to our exploration and definition of the Annie Zone, CARDS will help us identify new targets of our projects Lac à l'Eau Jaune and Winchester acquired lately." declared Mr. David Grondin, President and CEO of TomaGold.

"The principal advantage in the use of the artificial intelligence is the ability to update the model regularly. The backbone of CARDS is a data mining engine which learns the signature or fingerprints of known mineralized sites, and identifies points (targets) with a high statistical probability of similarity to known areas of mineralizations across less explored regions. We can follow the project from day to day while inserting the new drilling data. We will also be able to analyze their overall property by using the new signature. From the moment we receive the data from TomaGold, it is necessary to count between 5 to 10 working days for the production of the final report. We are proud to work with dynamic and innovating people having shown their know-how" declared Michel Fontaine, Vice-President – Business Development of DIAGNOS.

About TomaGold

TomaGold is a dynamic Canadian-based mineral exploration company. The Corporation is dedicated to create shareholders value on acquiring, exploring and developing quality Canadian gold properties in an efficient and environmentally responsible manner.

About DIAGNOS

Founded in 1998, DIAGNOS is a publicly traded Canadian corporation (TSX: ADK), with a mission to commercialize technologies combining contextual imaging and traditional data mining thereby improving decision making processes. DIAGNOS offers products, services, and solutions to clients in a variety of fields including healthcare, natural resources, and entertainment.

DIAGNOS can count on a multidisciplinary team that includes professionals in geophysics, geology, Artificial Intelligence, mathematics, as well as remote sensing and image interpretation. The Corporation's objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining.
