DIAGNOS completes \$2.2 million exploration mission under Quebec's Plan Nord

Brossard, Quebec, Canada – September 11, 2013 - DIAGNOS inc. (“DIAGNOS” or the “Corporation”) (TSX Venture: ADK), a leader in knowledge extraction and artificial intelligence technology, is pleased to announce that it has just completed the exploration mandate in three sectors totaling 1,924 claims that were prospected in Schefferville, Puvirnituk and Lac Pau under Quebec's Plan Nord.

The \$2.2 million contract for that mandate, for its Ontario partner, was announced in the June 30, 2013 press release. So far, only a portion of the designated claims totaling 5,242 claims based on a project spanning over 304,000 square kilometers, has been explored.

The mission, which lasted close to two months on properties near Schefferville and Lac Pau and one month for the Puvirnituk property, is a qualified success for Diagnos. A total number of 3,055 samples were collected from 2,197 outcrops by teams of geologists specializing in those territories and will be sent to an independent laboratory for analysis. The most important findings will be announced in the coming weeks. DIAGNOS used its exclusive Computer Aided Resources Detection System (CARDS) to identify the mineral potential in that part of Quebec's far north, a remote region with few staked claims.

About DIAGNOS

Founded in 1998, DIAGNOS is a publicly traded Canadian corporation (TSX-v: ADK), with a mission to commercialize technologies combining contextual imaging and traditional data mining thereby improving decision making processes. DIAGNOS offers products, services, and solutions to clients in a variety of fields including healthcare and natural resources.
