DIAGNOS Announces Contract Renewal and Expansion in the UAE

Brossard, Quebec, Canada – November 26, 2013 - Diagnos Inc. (“DIAGNOS” or “the Corporation”) (TSX Venture: ADK), a leader in healthcare technical services including, screening, software and algorithm development, data analysis, and image processing, announced today the signing of a renewal of a client agreement originally announced on January 15th 2013, and the expansion of CARA deployment in the United Arab Emirates.

“Over the course of the past year we have been working very closely with our UAE clients as well as with local healthcare providers and facilities. During the period between January 1st and October 31st 2013, we have had multiple screening systems deployed within 35 affiliated healthcare facilities across the United Arab Emirates. We estimate that approximately 650 patients were referred to retina specialists thus far in 2013 and given the opportunity to save their vision. Our client in the United Arab Emirates view our CARA screening platform as an effective and efficient tool within the context of their strategic initiatives, and have consequently decided to scale-up activities for 2014. We are very excited by increases in demand for screening programs and we are pleased to announce that we are doubling the current CARA deployment to meet market demand. We are pleased to announce that the value of our project with our lead Pharma client has been doubled to \$220,000 for 2014, with screenings starting this November to coincide with World Diabetes Day on November 14th,” said Peter Nowacki, Diagnos’ Vice-President.

About Diabetes

Diabetes kills one person every six seconds and afflicts 382 million people worldwide, according to the International Diabetes Federation (IDF), which has been canvassing the help of people ranging from celebrity chef Jamie Oliver to Bob Marley’s nephew to raise awareness about the problem. The number of diabetes cases has climbed 4.4 percent over the past two years and is more than 5 percent of the world’s population, according to new figures the IDF released last week. The number of people affected by the disease is expected to climb 55 percent to 592 million by 2035 as factors including poor diet, a more sedentary lifestyle, and increases in obesity and life expectancy fuel an epidemic. There were only 285 million sufferers worldwide in 2009. “We haven’t seen any kind of stabilizing, any kind of reversal,” Leonor Guariguata, an epidemiologist and project coordinator for IDF’s Diabetes Atlas. “Diabetes continues to be a very big problem and is increasing even beyond previous projections.” The disease, caused by a lack of insulin the body needs to convert blood sugar into energy, is becoming a financial burden on governments, and led to \$548 billion in global health-care spending this year, the federation said. To counter the surge, it recommends policy makers across many sectors should devise concerted action. More information on diabetes is available on the IDF web site www.idf.org.

About DIAGNOS

Founded in 1998, DIAGNOS is a publicly traded Canadian corporation with a mission to commercialize technologies combining contextual imaging and traditional data mining thereby improving decision making processes. DIAGNOS offers products, services, and solutions to clients in a variety of fields including healthcare and natural resources.

Neither the TSX Venture Exchange nor its Regulation Service Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
