PRESS RELEASE

2019.04.02

DIAGNOS Announces New Contract with Government in Bangladesh Through its Partner Eyes for All

Brossard, Quebec, Canada – April 2nd, 2019 - DIAGNOS Inc. (“DIAGNOS” or “the Corporation”) (TSX Venture: ADK), (OTCQB: DGNOF), a leader in early detection of critical health issues through the use of its FLAIRE platform based on Artificial Intelligence (AI), announces today the opening of the first eye screening diabetic clinic with a world leading global health research institute in Dhaka, Bangladesh.

Eyes For All (“EFA”) is working with a group that is operating multiple clinics and hospitals in the country. They have multiple diabetes clinics and, with the help of EFA, want to screen patients for diabetic retinopathy (“DR”) when patients come to evaluate their blood sugar. The plan is to screen up to 80 patients per day at the initial clinic. In the coming months, they expect to expand the coverage in other diabetic clinics.

The International Diabetes Federation (“IDF”) estimates that by 2030, Bangladesh would emerge as one of the countries with the largest number of people with type 2 diabetes. Diabetes in Bangladesh is growing at an alarming rate. Nearly half of the population with diabetes, 51.2%, don’t know that they have diabetes and don’t receive any treatment. A greater number of the diabetes population comes from educated and affluent families with 40.7% coming from the richest quintile.

EFA is a health technology consultancy company with relationships in Bangladesh across Non-Government Organizations (“NGOs”), healthcare research institutes and the public sector hospital network. “We are delighted to be able to partner with Diagnos in the effort to conduct DR screening across Bangladesh. The mismatch between existing healthcare infrastructure and demand in the country means that Diagnos’s proprietary technology will make a tremendous difference to the lives of many people in the country”, said Mr. Zahed Chowdhury, cofounder of Eyes For All.

“We are welcoming our partner first customer and we are looking forward to continuing our work with EFA to fight to prevent vision loss in Bangladesh and Asia. This new customer is a strong example of the incremental value of an indirect model to execute our growth plan in the country with large culture differential”, said Yves-Stéphane Couture, Diagnos vice-president of sales.

About DIAGNOS

DIAGNOS is a publicly-traded Canadian corporation with a mission of early detection of critical health issues through the use of its Artificial Intelligence (“AI”) tool CARA (Computer Assisted Retina Analysis). CARA is a tele-ophthalmology platform that integrates with existing equipment (hardware and software) and processes at the point of care. CARA’s Artificial Intelligence image enhancement algorithms make standard retinal images sharper, clearer and easier to read. CARA is accessible securely over the internet, and is compatible with all recognized image formats and brands of fundus cameras, and is EMR compatible. CARA is a cost-effective tool for screening large numbers of patients in real-time. CARA complies with local regulations, is FDA cleared for commercialization in the United States of America, is Health Canada licensed for commercialization in Canada and is CE marking compliant in Europe.
